

P2-17: Dealing with Infectious Disease Policy

The National Quality Standard requires early childhood education and care services implement specific strategies to minimise the spread of infectious illness and maintain a healthy environment for all children, staff, educators and families. The spread of infections in the early childhood environment is facilitated by microbial contamination of the environment, as well as the greater exposure to young children who are still developing hygienic behaviours and habits. QDPA will minimise children’s and staff’s exposure to infectious diseases by adhering to all recommended guidelines from relevant government authorities regarding the prevention of infectious diseases, promoting practices that reduce the transmission of infection, ensuring the exclusion of sick children and educators, supporting child immunisation, and implementing effective hygiene practices.

QDPA will provide up-to-date information and advice to parents, families and educators sourced from the Australian Government Department of Health, Australian Health Protection Principal Committee (AHPPC) and state Ministry of Health about infectious diseases as required. Recommendations from the Health Department will be strictly adhered to at all times.

NATIONAL QUALITY STANDARD (NQS)

| QUALITY AREA 2: CHILDREN’S HEALTH AND SAFETY | | |
|--|---------------------------------|--|
| 2.1 | Health | Each child’s health and physical activity is supported and promoted. |
| 2.1.1 | Wellbeing and comfort | Each child’s wellbeing and comfort is provided for, including appropriate opportunities to meet each child’s needs for sleep, rest and relaxation. |
| 2.1.2 | Health practices and procedures | Effective illness and injury management and hygiene practices are promoted and implemented. |
| 2.2 | Safety | Each child is protected. |

| EDUCATION AND CARE SERVICES NATIONAL LAW AND REGULATIONS | |
|--|---|
| Sec. 172 | Offence to fail to display prescribed information |
| Sec.174(2)(a) | Serious incident- any emergency for which emergency services attended |
| 12 | Meaning of serious incident |
| 77 | Health, hygiene and safe food practices |
| 83 | Staff members and family day care educators not to be affected by alcohol or drugs |
| 85 | Incident, injury, trauma and illness policies and procedures |
| 86 | Notification to parents of incident, injury, trauma and illness |
| 87 | Incident, injury, trauma and illness record |

PURPOSE

Children encounter many other children and adults within the Preschool environment which can result in the contraction of infectious illnesses. QDPA has a duty of care to ensure that children, families, educators, and visitors of the Preschools are provided with a high level of protection during the hours of the Preschool's operations. We aim to minimise cross contamination and the spread of infectious illnesses by implementing best practice and high standards of personal hygiene across our Preschools.

This policy communicates clear directions and guidance about protocols and actions to be followed to avoid adversely affecting the safety and health of children, other staff members and visitors to QDPA. A simple, safe and effective way of protecting individuals and others within the community against harmful diseases is immunisation.

SCOPE

This policy applies to children, families, staff, educators, management, approved provider, nominated supervisor, students, volunteers and visitors of QDPA.

IMPLEMENTATION

Under the Education and Care Services National Regulations, the approved provider must ensure policies and procedures are in place in relation to dealing with infectious diseases. (ACECQA, August 2021).

QDPA is committed to minimising the spread of infectious diseases and viruses by implementing recommendations as stated in the *Staying healthy: Preventing infectious diseases in early childhood education and care services* (Sixth Edition) developed by the Australian Government National Health and Medical Research Council and advice provided from the Australian Health Protection Committee (AHPC).

QDPA are guided by decisions regarding exclusion periods and notification of infectious diseases by the *Australian Government- Department of Health* and local Public Health Units in our jurisdiction as per the Public Health Act.

The need for exclusion and the length of time a person is excluded from the Preschool depends on:

- how easily the infection can spread.
- how long the person is likely to be infectious and
- the severity of the infectious disease or illness.

PREVENTING INFECTIOUS DISEASES

Children enter education and care services when their immune systems are still developing. They have often not been exposed to many common germs and therefore are susceptible to bacteria that may cause infections. Given the close physical contact children have with other children in Preschool, it is very easy for infectious diseases and illnesses to spread through normal daily activities as germs can be picked up directly from an infected person or from the environment. It is important to understand that an infected person may not show any signs or symptoms of illness.

Our Preschools implement rigorous hygienic practices to limit the spread of illness and infectious diseases including:

- effective hand washing hygiene.
- cough and sneeze etiquette
- appropriate use of gloves
- exclusion of children, educators, or staff when they are unwell or displaying symptoms of an infectious disease or virus.
- effective environmental cleaning including toys, resources and bedding.
- encouraging use of the outdoor environment.
- requesting parents and visitors to wash their hands with soap and water or hand sanitizer upon arrival and departure at the Preschool.
- ensuring adequate ventilation such as open windows and doors.
- encouraging children, educators, or staff to seek medical attention if they show symptoms of an infectious disease or virus.

IMMUNISATION REQUIREMENTS

- Immunisation is a reliable way to prevent many childhood infectious diseases. Unvaccinated children due to their parent's conscientious objection are no longer able to be enrolled in approved early childcare services.
- Children who cannot be fully vaccinated due to a medical condition or who are on a recognised catch-up schedule may still be enrolled upon presentation of the appropriate form signed by a medical practitioner who meets the criteria stated by the Australian Government.
- Educators and other staff of QDPA are highly recommended to keep up to date with all immunisations including yearly influenza vaccinations. These include vaccinations recommended by the National Health and Medical Research Council (NHMRC).
- Staff are required to provide an *Immunisation History Statement* from the Australian Immunisation Register (AIR) and/or records from their general practitioner to management for their staff record upon employment, and whenever a new vaccination has been administered.
- Vaccination is important as not only can staff members catch a potentially serious infection such as measles or whooping cough, but they could also then inadvertently pass it onto children in their care who are too young to have had their vaccinations or to women who may be pregnant.
- Exclusion periods and notification of infectious diseases are guided by the *Australian Government- Department of Health* and local public health units in our jurisdiction as per the Public Health Act. These apply to children and staff at the Service. In the event of an outbreak of a vaccine preventable disease at our Service, staff who are not vaccinated will be notified and should be excluded from the workplace. [See: *Immunisation Policy* for further information]

EXCLUDING CHILDREN FROM THE SERVICE

When a child has been diagnosed with an illness or infectious disease, the Service will refer to information about recommended exclusion periods from the [Public Health Unit](#) (PHU) and *Staying healthy: Preventing infectious diseases in early childhood education and care services*.

[Minimum periods for exclusion from childcare services](#)

- When an infectious disease has been diagnosed, the Preschool will display appropriate documentation and alerts for families including information on the illness/disease, symptoms, infectious period and the exclusion period. (This information can be obtained from *Staying healthy: Preventing infectious diseases in early childhood education and care* and *Public Health Unit, or Department of Health*).

- If a vaccine preventable disease occurs in the Preschool, children who have not been fully immunised will be excluded from care; staff who are not vaccinated will be notified and should be excluded from the workplace
- Management will check all children's Immunisation records and alert parents as required
- A medical clearance from the child's General Practitioner stating that the child is cleared to return to the childcare setting will also be required before the child returns to care

REPORTING OUTBREAKS TO THE PUBLIC HEALTH UNIT AND REGULATORY AUTHORITY (REG. 175 (2) (C))

Outbreaks of communicable diseases and contagious viruses represent a threat to public health. To help prevent outbreaks, the Department of Health monitors the number of people who contract certain infectious diseases and their characteristics, the recent travel or attendance of infected people in a public place or on public transport and works with health specialists and doctors to help prevent the transmission of diseases to other people.

The Public Health Act 2010 lawfully requires and authorises doctors, hospitals, laboratories, school principals and early education and care service nominated supervisors to confidentially notify the Public Health Unit (PHU) of patients with certain conditions, and to provide the required information on the notification forms. Specialist trained public health staff review this information and if necessary, contact the patient's doctor, and sometimes the patient, to provide advice about disease control and to complete the collection of information.

All information is held confidentially in order to protect the patient's privacy. Under the Commonwealth Privacy Acts, patient information is only released/disclosed where it is lawfully required or authorised.

Management is required to notify the local PHU by phone as soon as possible after they are made aware that a child enrolled at the Preschool is suffering from one of the following vaccine preventable diseases:

- Diphtheria
- Mumps
- Poliomyelitis
- Haemophilus influenzae Type b (Hib)
- Meningococcal disease
- Rubella ('German measles')
- Measles
- Pertussis ('whooping cough')

- Tetanus

Notification is also required for:

- an outbreak of 2 or more people with gastrointestinal or respiratory illness in a 48-hour period

Management will closely monitor health alerts and guidelines from Public Health Units and the Australian Government- Department of Health for any advice and emergency health management in the event of a contagious illness outbreak. The Approved Provider must also notify the Regulatory Authority of any incidence of a notifiable infectious disease or illness.

All illnesses and infectious diseases of both staff and children will be recorded in OWINA on the *Illness Register*. This register also provides for the recording of reports to the Public Health Unit and Regulatory Authority for record keeping compliance.

THE APPROVED PROVIDER/NOMINATED SUPERVISOR WILL ENSURE:

- that obligations under the *Education and Care Services National Law and National Regulations* are met
- educators, staff, students, visitors and volunteers have knowledge of and adhere to this policy and associated procedure
- all new employees are provided with a copy of this policy as part of their induction process
- families are aware of this *Dealing with Infectious Diseases Policy* upon enrolment
- children are protected from harm by ensuring relevant policies and procedures are followed regarding health and safety within QDPA
- an Immunisation History Statement for each child is collected on enrolment and maintained/updated regarding the child's immunisation status (AIR) and any medical conditions
- a staff immunisation record that documents each staff member's previous infection or immunisations (including dates) is developed and maintained
- QDPA preschools implement recommendations from [Staying healthy: Preventing infectious diseases in early childhood education and care services](#) to maintain a healthy environment
- that all information regarding the prevention and transmission of infectious diseases is sourced from a recognised Government Health authority [Australian Government Department of Health](#)
- exclusion periods for people with infectious diseases recommended by Government Authorities are implemented for all staff, children, parents, families and visitors
- wall charts about immunisation are displayed

- the Public Health Unit is notified as soon as possible after they are made aware that a child enrolled has a vaccinated preventable disease
- the Public Health Unit is notified in the event of an outbreak of viral gastroenteritis. Management must document the number of cases, dates of onset, duration of symptoms. An outbreak is when two or more children or staff have a sudden onset of diarrhoea or vomiting in a 48-hour period. (NSW Government-Health 2019)
- after confirmation that a child is suffering from an infectious disease, and as soon as practical, the family of each child enrolled in the Preschool must be notified whilst maintaining the privacy of the ill/infectious child. Communication may be:
 - through a letter from the educator or approved provider
 - via email
 - notice clearly displayed at the Service
- families are advised that they are requested to alert the Preschool if their child is diagnosed with an infectious illness
- daily attendance records for staff, children and visitors are up to date at all times
- safe health and hygiene practices are implemented at all times throughout the day
- educators and staff routinely role model hand washing, hand drying, cough and sneeze etiquette
- effective environmental cleaning policies and procedures are adhered to all times
- children are supported in their understanding of health and hygiene practices throughout the daily program and routine (hand washing, hand drying, cough and sneeze etiquette)
- families are provided with relevant sourced materials and information on infectious diseases, health, and hygiene including:
 - the current National Immunisation Schedule
 - exclusion guidelines in the event of a vaccine preventable illness at the Service for children that are not immunised or have not yet received all their immunisations
 - advice and information regarding any infectious diseases in general and information regarding any specific infectious illnesses that are suspected/present in the Service.
- all educators are mindful and maintain confidentiality of individual children's medical circumstances
- that opportunities for educators to source pertinent up to date information from trusted sources on the prevention of infectious diseases and maintaining health and hygiene are provided
- that opportunities for staff, children, and families to have access to health professionals by organising visits/guest speakers to attend the service to confirm best practice are provided

- families are advised to keep children at home if they are unwell. If a child has been sick, they must be well for 24hrs before returning to the Service. If the illness is related to gastroenteritis the child is not to return to the Service for up to 48 hours (see: exclusion periods). The nominated supervisor may approve the child's return to the Preschool if families provide a doctor's certificate/clearance certifying that the child is no longer contagious and is in good health. Please note: it is not always possible to obtain a doctor's certificate or clearance for suspected cases of an illness. The decision to approve a child's return is up to the approved provider/nominated supervisor
- to complete the register of *Incident, Injury, Trauma or Illness* and document incidents of infectious diseases no later than 24 hours of an illness or infectious disease occurring in the Preschool
- educators or staff who have diarrhoea or an infectious disease do not handle food for others and are not to return to work until they have been symptom free in accordance with the required exclusion periods
- any risk to a child or adult with complex medical needs is minimised in the event of an outbreak of an infectious disease or virus. This may require a risk assessment and decision-making regarding the suitability of attendance of the child or staff member during this time.

EDUCATORS WILL ENSURE:

- that any child suspected of having an infectious illness is responded to and their health and emotional needs always supported
- any child suspected of having an infectious illness is isolated from other children and supervised whilst waiting for collection by parents or guardian.
- that appropriate health and safety procedures are implemented when treating ill children; wear disposable gloves, face mask or other PPE if needed.
- families are aware of the need to collect their unwell child/ children within 30 minutes from the Preschool.
- all resources or items touched by a child with a suspected illness are thoroughly cleaned and disinfected- (cushions, pillows, toys)
- their own immunisation status is maintained, and the Approved Provider/Nominated Supervisor is advised of any updates to their immunisation status.
- opportunities are provided for children to participate in hygiene practices, including routine opportunities, and intentional practice such as hand washing, sneezing and cough etiquette.
- consideration is given to the combination of children to decrease the risk of attaining an infectious illness when planning the routines/program of the day.
- they adhere to QDPA's health and hygiene policy including:
 - hand washing

- daily cleaning of the Preschool
- wearing gloves (particularly when in direct contact with bodily fluids (nappy changing and toileting))
- appropriate and hygienic handling and preparation of food
- wearing face masks (if mandated by PHU)
- they maintain up-to-date knowledge with respect to Health and Safety through on-going professional development opportunities.
- Children who are resting or sleeping, are positioned a safe distance from each other to prevent any spread of illness or infection. Where possible, a head to toe resting/sleeping arrangement is encouraged.
- bedding is washed after each use, and if the surface is known to be contaminated with a potential infectious disease, disinfectant is also used to clean the surface.
- children wash their hands before and after any experience that may have a higher risk of spreading illness/infectious diseases, such as cooking experiences.

PREVENTION STRATEGIES FOR MINIMISING THE SPREAD OF DISEASE WITHIN OUR PRESCHOOLS INCLUDE STAFF AND EDUCATORS WILL ENSURE:

- full adherence to the NHMRC childcare cleaning guidelines
- surfaces are cleaned first with detergent and water before using disinfectants. (Disinfectants cannot kill germs unless areas are clean)
- that a daily clean is carried out on other surfaces that may transmit germs such as high touch objects including doorknobs, tables, light switches, handles, remotes, low shelving, etc. This will be increased to several times a day if an outbreak of an infectious disease/virus has been recorded in the Preschool or to minimise the risk of transmission of a virus.
- that if a child has a toileting accident, the items are placed in a plastic bag with the child's name on it. The plastic bag will be stored in a sealed container labelled 'soiled/wet clothing' for parents to take home.
- cloths and mops are colour coded so that a separate cloth or mop is used to clean floors, bathroom, art and craft, and meal surfaces, and coloured cloths are washed separately to avoid cross contamination.
- that any toy that is mouthed by a child is placed immediately in the 'toys to be washed' basket located on the top shelf in the nappy change area and washed with warm soapy water at the end of the day. All washable toys out on display for the children are to be washed on a weekly basis to decrease the risk of cross contamination and recorded with the date and a signature as evidence.
- toys and equipment (that are difficult to wash) will be washed with detergent (or soap and water) and air-dried in sunlight.

- washable toys and equipment will be washed in detergent and hot water or the dishwasher/washing machine and aired to dry (toys will not be washed in the dishwasher at the same time as dishes).
- all cleaning procedures will be recorded on the relevant cleaning Checklists.
- furnishings, fabric tablecloths and pillowcases will be laundered at the end of each week and hung out to dry, or sooner if visibly dirty or contaminated. This will be increased to the end of each program across the week during winter months or daily during an outbreak of illness in the Preschool.
- floor surfaces will be cleaned daily after each meal and at the end of each day.
- toilets/bathrooms will be cleaned in the middle of the day, the end of the day and whenever needed throughout the day using detergent and water followed by disinfectant and paper towel.
- when cleaning up spills of faeces, vomit or urine off floors, bathrooms etc, educators will use disinfectant on the surface after cleaning it with detergent and warm water.
- management must ensure pregnant women are aware of the occupational risks and exposure to specific infectious diseases including Cytomegalovirus (CMV). Occupational risks of CMV in childcare should be individually managed and control measures implemented. Risk management may include ensuring pregnant women do not work with children under two years of age including avoiding changing nappies or assist in toileting or cleaning up toileting accidents to prevent unexpected cross contamination and risk of contracting [Cytomegalovirus \(CMV\)](#).

FAMILIES WILL:

- adhere to QDPA's policies regarding *Dealing with Infectious Diseases, Immunisation, Incident, Injury, Trauma and Illness* and exclusion requirements
- adhere to the QDPA's restrictions of entry into the Preschool's in the event of an outbreak of an infectious disease or virus.
- adhere to QDPA's policy regarding *Hand Washing*
- exclude their child from Preschool if they display symptoms of an infectious illness or disease or in the event of a vaccine preventable disease occurs in the Preschool and their child is not immunised fully.
- alert the Preschool if their child is diagnosed with an infectious illness
- advise the Preschool of their child's immunisation status, by providing a current Immunisation History Statement recorded on the Australian Immunisation Register (AIR) for the Preschool to copy and place in the child's file.
- advise the Preschool when their child's medical action plan is updated.
- provide sufficient spare clothing, particularly if the child is toilet learning.

- adhere to QDPA's risk minimisation strategies if their child has complex medical needs in the event of an outbreak of an infectious disease or virus.
